SUBJECT : MEDICAL NOTES

---

Malarial Prophylaxis

The notes covering the use of malarial prophylaxis have been updated and changed.

Please ensure that the enclosed sheet replaces the current page 9 of the medical notes. Page 10 is now obsolete.

Please also ensure that the notes are read thoroughly and that confirmation of their receipt is made in your next En Route Report to us.

Please also note that contrary to popular belief, malarial prophylaxis do not remain in the body and 'build up' therefore it is not necessary for preventative treatment to start prior to one week before entering a malarial area. Continue to take tablets for 4-6 weeks after leaving the malarial area.

If there are any questions re the above please ask for clarification as soon as possible.

Happy pill popping!
